ABOUT THE COMPETITION

The 2026 Shenzhen International FinTech Competition — WeBank FinTech University Challenge is held with Shenzhen Municipal Local Financial Administration, Shenzhen University and WeBank jointly serving as strategic guidance units and the Shenzhen University–WeBank Institute of FinTech as host. **The competition has been successfully held for eight consecutive editions**, producing thousands of outstanding projects, attracting nearly 10,000 university students from China and abroad, and continuously advancing technological innovation in fintech, talent development, and industry–academia–research collaboration.

In response to the global momentum of artificial intelligence, **the competition is comprehensively upgrading its International Track (Artificial Intelligence direction)**. With the 2026 APEC Summit set to take place in Shenzhen, the competition is seizing this opportunity to address the profound transformations that AI technologies are bringing to global economic and social development, upgrade its format with a more open international outlook, and expand recruitment to universities worldwide.

The competition has invited the **CCF Technical Committee on Digital Finance, Tsinghua Institute of Financial Technology, IEEE Computational Intelligence Society Singapore Chapter and IEEE Computational Intelligence Society Shenzhen Chapter** to serve as technical guidance units. A group of industry experts will serve as academic advisers and judges, providing participating teams with end-to-end professional support from competition format design through entry evaluation. We warmly invite university students from China and around the world to explore the innovative future of fintech and artificial intelligence together!

SUBJECTS

Tracks AI & DATA ANALYTICS | International Track GLOBAL AI

01 Artificial Intelligence Track

Banking AI Agent

The Domestic Track focuses on "AI operating banks on behalf of users" (safety + experience). Teams must build an AI Banking Agent that understands financial intent through natural-language dialogue, autonomously plans and executes banking operations, and connects with users through channels such as apps and IM. The system must cover at least three core scenarios; full coverage is encouraged.

Challenge requirements — Cover at least 3 core scenarios

01 **Smart Transfers** — Transfer by name, phone number or note; schedule transfers; split-bill collection

02 **Bill Analysis** — Spending categories; unusual-transaction detection; monthly / annual reports

03 **Wealth Operations** — Product recommendation and comparison; risk assessment; subscribe / redeem

04 **Card Management** — Card application; limit adjustment; transaction restrictions / unlock; card loss reporting

05 **Subscriptions / Direct Debit** — Detect recurring charges; renewal reminders; one-click cancellation

06 **Cross-scenario Orchestration** — Recognise a birthday need, reserve funds and automatically order flowers, a cake and other services

Challenge Brief

02 Data Analytics Track

Five challenges based on real fintech scenarios assess data sourcing, analytical modelling and business application. Teams select one challenge.

Challenge 1 | Challenge 2 | Challenge 3 | Challenge 4 | Challenge 5

Stability of Credit Risk Scoring

Build a credit-risk scoring model that combines strong discriminatory power with stable outputs. The model should capture differences in customer qualifications, operations and liabilities while maintaining reasonable consistency when core customer characteristics remain unchanged.
